

# PRINTING PRESS

**Textile Printing Press**  
**38 x 38 cm Working Area**

# DESIGN AND CUT

When designing your print you do not have to worry about anything.  
This is different when it comes to cutting.

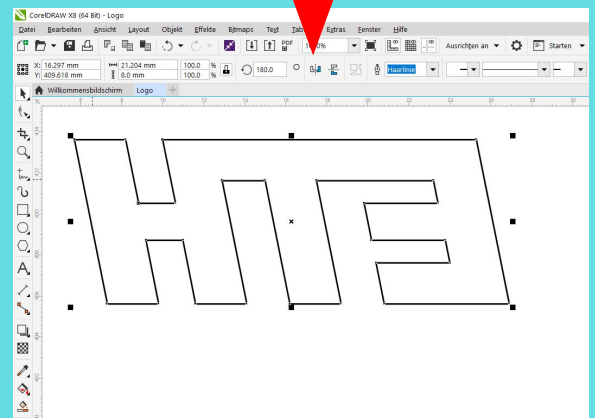

First get the needed color from a Makerspace Manager. Place it in the cutting plotter with the clear film facing down.

## Mirror the design

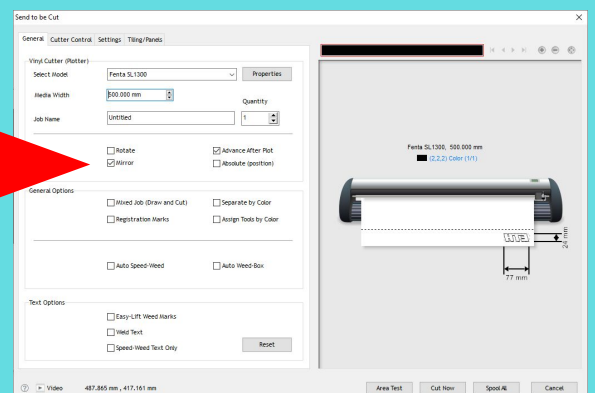

To ensure your design will not be print wrong you will need to mirror it.

In Coreldraw use the marked button to mirror your design.

OR

In VinylMaster use the marked button during the cutting operation to mirror your design.

# PREPARING

Since the press takes some time to heat up turn it on already.

In the meantime cut the vinyl cut the vinyl to rough size using a knife.

In the meantime cut the vinyl cut the vinyl to rough size using a knife. And peel away the material that you don't want to print.

Wait for the press to reach at least 170°C.

# PRINTING

Place your fabric on the foam matt.  
Then add the vinyl on top. Make sure  
that the clear foil is on top.

Place another piece of fabric on top.  
Import: Double check that none of the  
clear foil is sticking out!

Close the press and wait 15 seconds  
until it will start beeping.  
Open it and remove your fabric for it to  
cool down.  
After it is cooled peel the clear foil.  
Done!

**ATTENTION: The press is working  
with heat.  
Do not touch the top surface!**
